

Chapter 4

TMF4935 Final Year Project II

System Development Project

- Possible sections
 - System requirements (hardware and software)
 - System development (installation and configuration, e.g., XAMP, Android studio)
 - Backend and frontend implementation
 - GUI implementation
 - Testing (e.g., functional testing, unit testing)
- Do not put the source code (snippet or pseudocode is acceptable)

Research-Based Project

- Possible sections
 - System requirements (hardware and software)
 - System development (installation and configuration, e.g., CUDA)
 - Data collection process
 - Data processing
 - Data augmentation
 - Training, validation, tuning, testing
 - Web-based system deployment
- Do not put the source code (snippet or pseudocode is acceptable)
- Result analysis (if you don't have chapter 5)

Snippet

- Use the following prompt to write a good snippet

What is snippet? Why we need it in the thesis writing, especially in Chapter 4: Implementation. How do we decide when to use it? How to convert a long complete source code to snippet (what to exclude and include from the complete source code)? Show the example of the conversion process

- Do not screenshot from DLE and paste the code

Important Announcement

- Next class, tentatively will be on Week 3 (check announcement in eLeap)
- Compulsory to attend talk: ***From Campus to Corporate: The Industry Readiness Roadmap***
 - 2:00PM – 4:00PM
 - 8 April 2026
 - Venue to be announced
